SharkNinja SharkNinja is a household goods company that sells kitchen appliances and kitchen utensils. Ninja® Foodi™, a 2:1 air fryer and a pressure cooker, comes with an incredibly handy instruction manual that guides users beyond the configuration process by providing chronometre cooker guides and full-length recipes (as shown in the image below). Image source SharkNinja's instruction manual is highly effective due to prescriptions included. It helps users to configure their product and provides the following steps and inspiration for how to actually use the product — much more useful than learning to activate and turn off the device. What We Can Learn from SharkNinja: This brand shows us that an instruction manual can be more than a manual, as it can provide users with actionable ideas on how to actually put your product to use. For example, if you are a SaaS business, your instruction guide can teach users how to set up a blog on your CRM, along with possible ideas for the first blog posts or additional resources to help you start with your writing. 3. IKEA IKEA, furniture distributor, is well known for its products and accompanying instruction manuals. The image below is an example of the first-page instruction manual for Poang, a chair frame. Image Source It is a common conception that long-lasting text pieces are difficult to follow in instruction guides. If I buy a product with a manual like that, I usually only go to YouTube and find a configuration video of an unrelated third party. Now, most of us do not read the instruction manual, although we should probably. But it is still a good idea to save them, especially for the tools you do not use frequently, or that are complicated. But do you keep the manuals to find them? There is a way. Put each manual in a zipper bag, and cut a part of the packaging so that it can say what manual is in each bag. To maintain these easily accessible, place them on a nail, just on the work bank. Proceed
